

Testing cases-Part1

Requirement to test	Actual Outcomes	Test results
<p>1. Weather condition should be taking from open API, please apply for your own API key. https://openweathermap.org/api. Weather condition for today should be displayed on booking page.</p>		<p>Current weather condition is showing on the booking page, but because of the CORS control, have to disable the web security.</p>
<p>2. Load the boat data settings from XML files.</p>		<p>Boat data load successfully through the XML doc.</p>

3. Users should be able to specify a different number of people and select a date, time and boat name. Date range only from today and up to next 4 days. Booking time should be 10 am and 2 pm.

Users can choose the number of visitors and date including today and the next 4 days.

Users can choose from two boats and two-time sets.

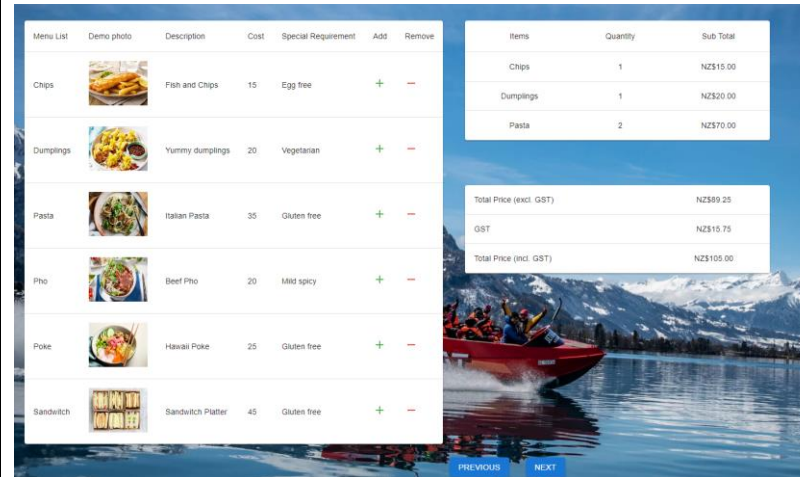

4. Some seats have already been taken, so users cannot book them.
- Each seat price for first two rows is \$30, for next three rows it is \$25, and for the rest it is \$20.
- iii. Different boats can accommodate a different number of people. Each row and seat should have a unique number.

Each seat has a unit number and when the user chooses the seats, the color changes to green.

Grey seats are unavailable seats, blue seats are good for booking.

5. User must be able to dynamically see a list of menu items. Each item has image, description, type indication and cost. User can select item and specify amount .Total for current selection should be display, that user can do informative choice.

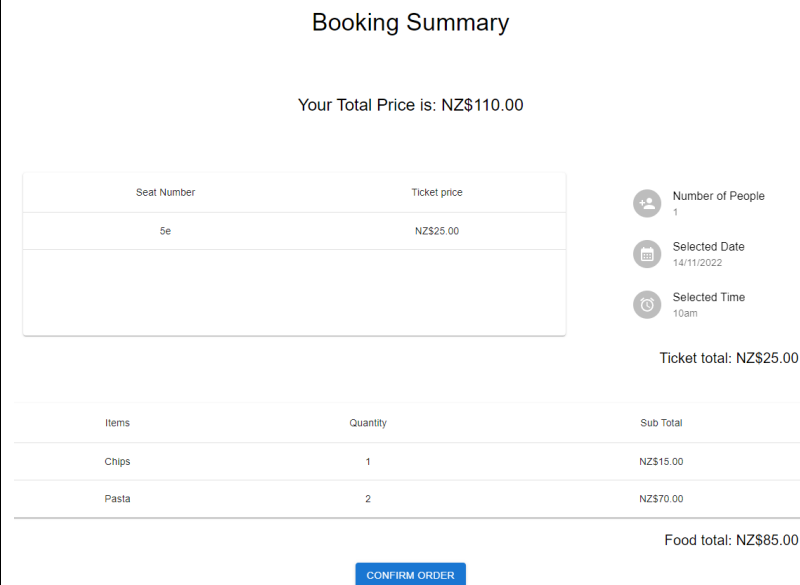

If user wants to change their selection, the system should be able to update dynamically.

The menu is designed with names, pics, descriptions, prices, and special requirements. Users can use the plus and remove buttons to choose from.

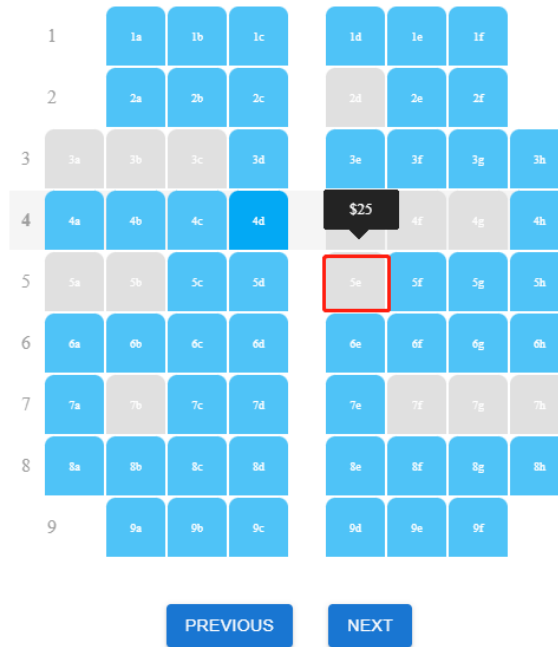

On the right side, the selected meal will show on the table and the user can see the total price for the meal.

6. Summary for booking should have: date, time, name of boat, seats number, number of people coming, menu selected and total cost.

The summary page can catch all the information and display the date, time, name of the boat, seat number, the number of people coming, menu selected, and total cost.

7. After booking confirmation is done, seats should be marked as unavailable/booked for that time and selected date.
- If user decided to add additional seat(s) for same day and booking time, his earlier selected seats should be marked as booked.

When the booking is confirmed, start a new booking at the same time can see the previous booking has been locked and the seat is unavailable.
